

## High-Tech for everybody... ... HSK-BASIC as the medium step into the highest quality level of die boards

### Perfect and Innovative:

High-quality packaging boxes require stabilized die boards.

Two integrated steel frames reinforce two separate boards in a perfect way and create a very high dimensional stability. The wooden material of the two forms keep the knife at its place and a premium combination of high dimension precision, very high form stability and long lifetime is achieved.

These stabilized die forms are designed for steel counter plates with very small tolerances and many reknifings and the HSK-BASIC version is the medium technology level of the R+S die board family.

### Advantages:

- HSK: Wood-Steel-Compound, the optimum combination in stability and durability
- Double reinforced with steel grids
- Perfect for steel counter plates and medium to high-volume runs
- 5-8 reknifings possible
