

High-Tech for everybody... ... HSK-LIGHT as the first step into the highest quality level of die boards

Perfect and Innovative:

High-quality packaging boxes require stabilized die boards.

Integrated steel frames reinforce these boards in a perfect way and create a proper dimensional stability. The wooden material of the form keeps the knife at its place and an optimum combination of dimension precision and form stability is achieved.

These stabilized die forms are designed for steel counter plates and multiple reknifings and the HSK-LIGHT version is the first and commercially most interesting level of the R+S die board family.

Advantages:

- Low weight – Easy handling of the die
- Optimized for steel counter plates
- Multiple reknifings possible
- Commercially attractive to replace standard multiplex die forms

Perfection as the sum of most progressive technologies
